

Saudi Artificial Intelligence Company

AI Solutions for Business

We design, build and integrate AI solutions for efficient operations and clearer business decisions.

Consulting, Solutions & Training

About Us

Based in Riyadh, we combine AI consulting, development, integration and training to turn business needs into practical applications that can grow.

Our Vision

A trusted AI partner for Saudi Arabia and the Gulf, supporting measurable business growth.

Our Mission

Solutions that fit clients' data, processes and budgets, with the skills to sustain their value.

Our Principles

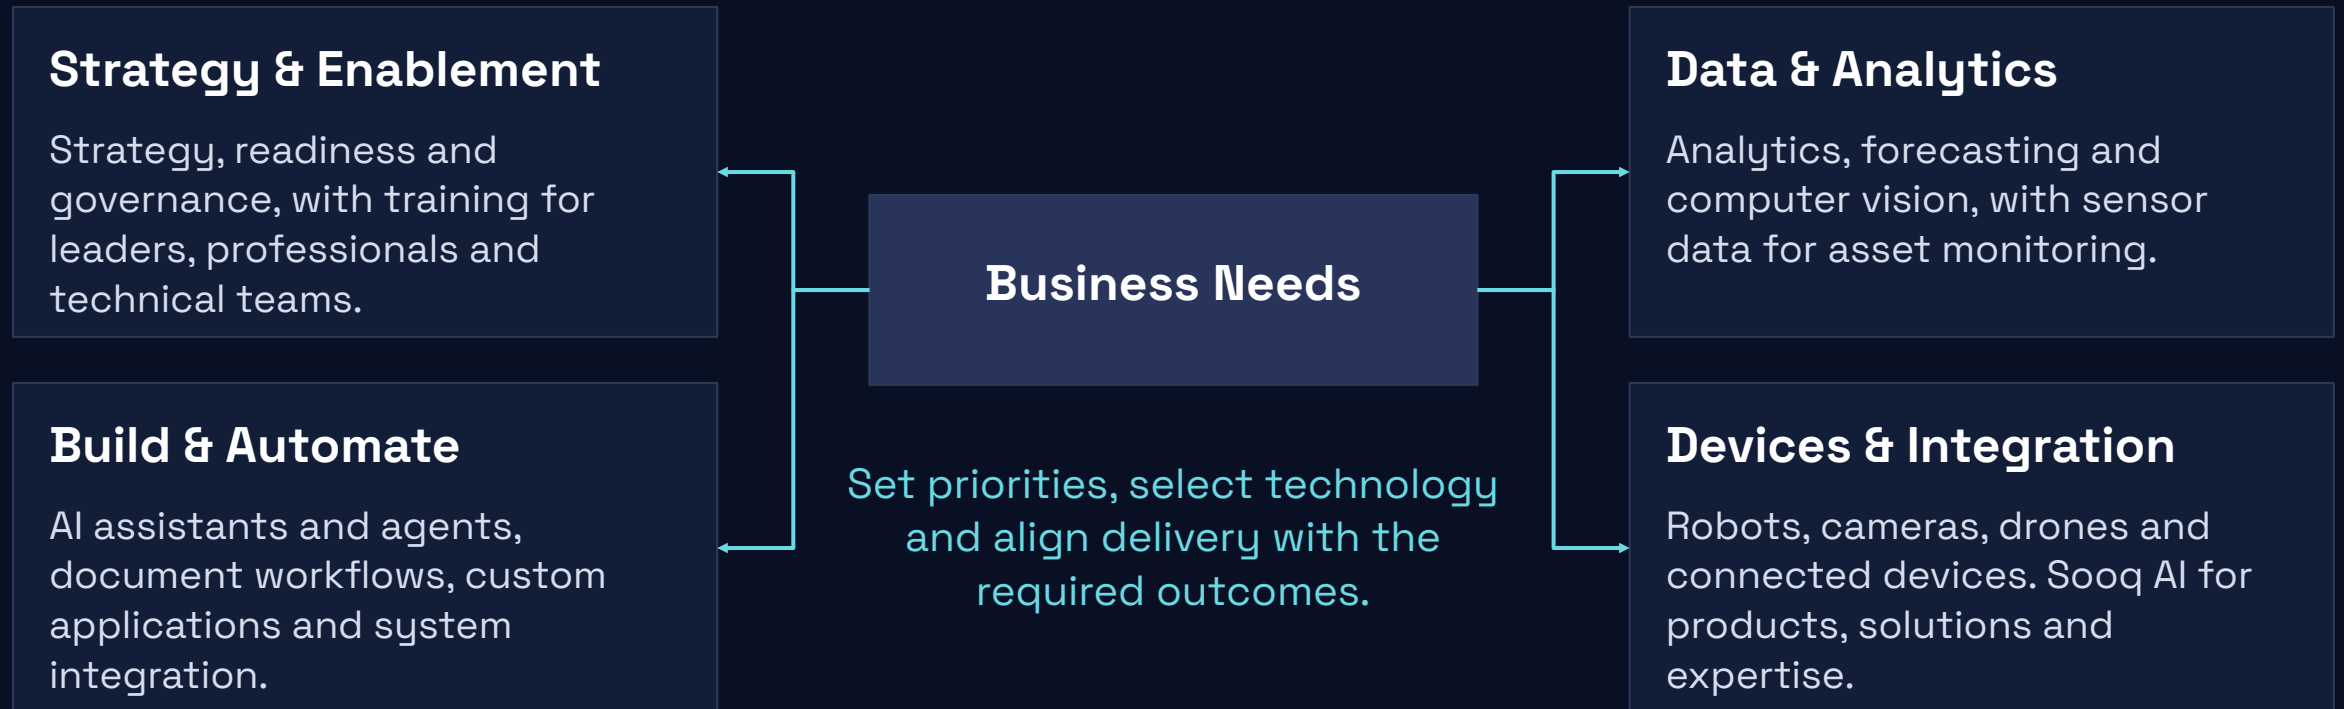

Clear scope and roles, client collaboration, innovation driven by real needs, and expansion guided by pilot results.

Illustration

Integrated Services

We connect strategy, implementation and operations, selecting solution components to fit the organization and its desired outcomes.

Strategy & Governance

We turn interest in AI into practical priorities and a delivery roadmap based on expected value, resources and risk.

Readiness Assessment

01

Review processes, data, systems and skills. Identify what needs to be in place before implementation.

Opportunity Prioritization

02

Compare use cases by value, effort and risk, then select an initial pilot with measurable outcomes.

Technology Selection

03

Define requirements, compare solutions and providers, and clarify integration, hosting, costs and operating roles.

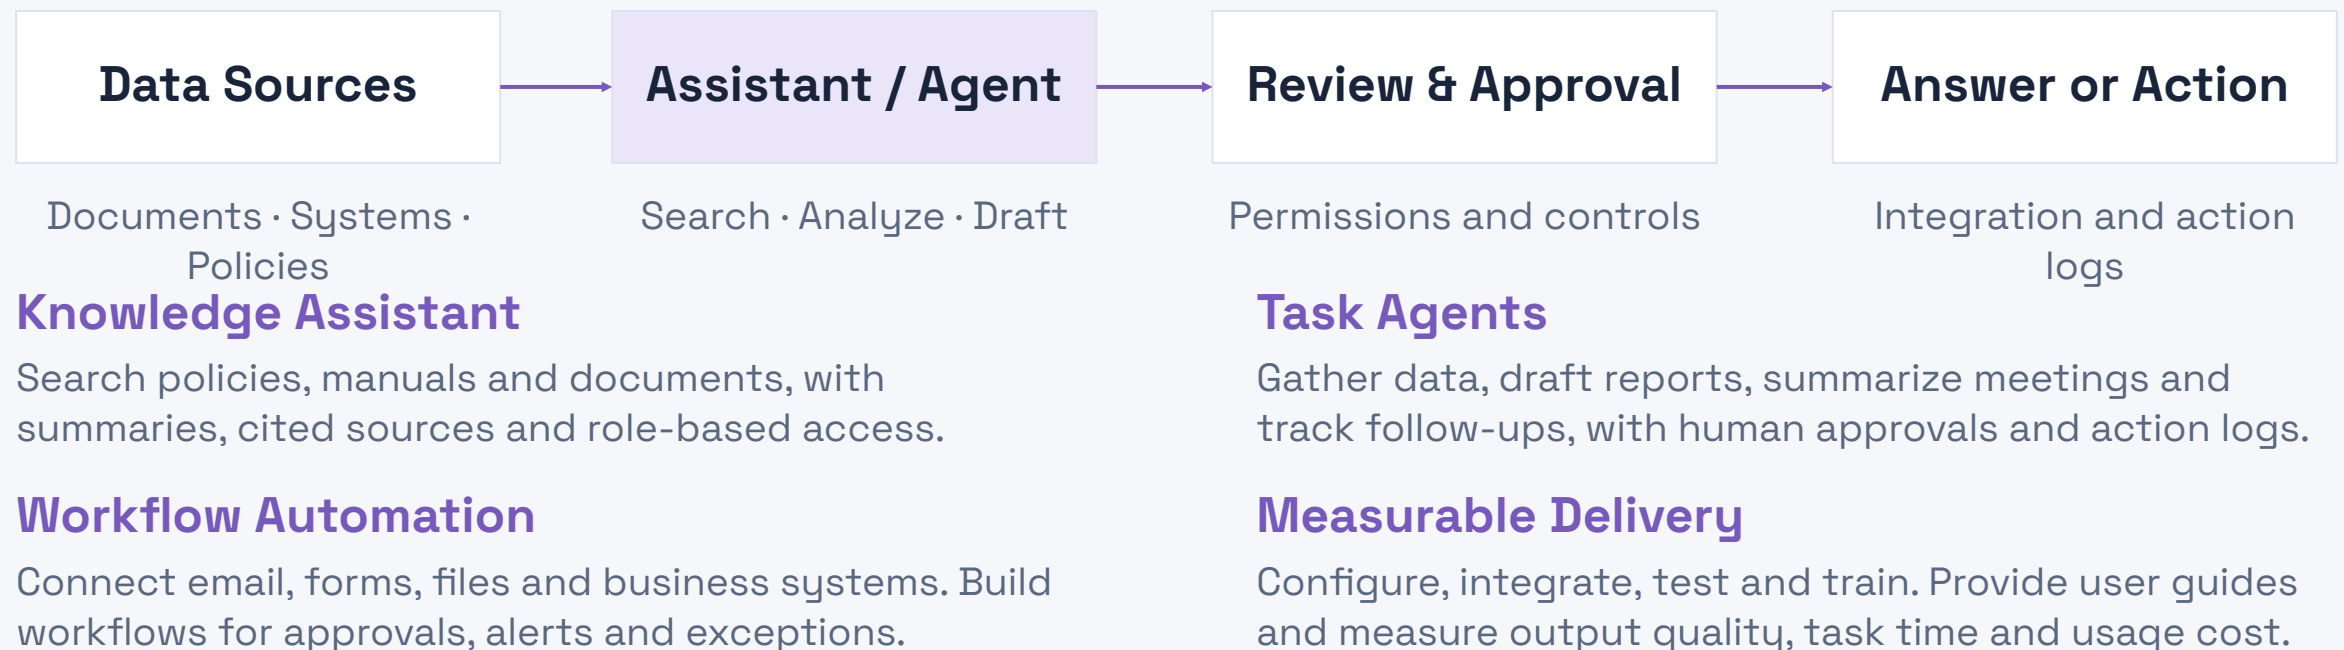

Governance by Design

04

Define data sources, access rights and human approvals. Document procedures and review output quality.

AI Assistants & Agents

We build applications connected to enterprise sources and processes, helping people access knowledge and complete tasks within defined permissions.

Enterprise Operations

We apply AI to repetitive and analytical tasks, connecting outputs to enterprise systems and decision-makers' permissions.

Procurement & Suppliers

Analyze spend, classify purchases, draft RFPs and compare supplier bids. Track documents, renewals and deliveries.

Human Resources

Policy support, job profiles, onboarding and workforce analytics, with confidentiality and human review of people decisions.

Finance & Accounting

Extract invoice data, analyze spending and variances, prepare reports and flag unusual cases for specialist review.

Each solution can stand alone or connect several departments in one workflow.

Customer Experience & Team Productivity

We connect knowledge, content and follow-up to help customer-facing and management teams respond and act.

Marketing & Sales

Brand-aligned content, customer briefs, opportunity and proposal tracking, and feedback analysis linked to CRM.

Contact Centres

Call summaries, recurring topic analysis, shared knowledge and response and service quality measures.

Customer Service

Web and digital assistants handle enquiries, suggest answers, classify requests and route cases to the right employee.

Management & Projects

Meeting summaries, task assignment and progress reports, with dashboards for deadlines, commitments, delays and variances.

Data & Analytics

We prepare data and connect its sources to build a basis for knowledge and measurement, turning it into insight for daily work.

Data Preparation

Clean data, connect and document sources, and meet quality needs before analysis or modelling.

Predictive Models

Demand forecasts and resource analysis, with accuracy and limits assessed against available data.

Dashboards & Analytics

Unified KPIs and reports on operations, consumption, inventory and unusual patterns.

Document Intelligence

Extract fields from documents and scans, connect them to systems and review uncertain results.

Computer Vision & Smart Operations

We link images, video, sensor data and logs for better monitoring of assets, sites and resources.

Computer Vision

Quality checks, counts, occupancy, crowd and safety monitoring. Camera, lighting and site needs apply.

Internet of Things

Connect sensors to energy, water, environment and asset dashboards, with clear workflows for alerts.

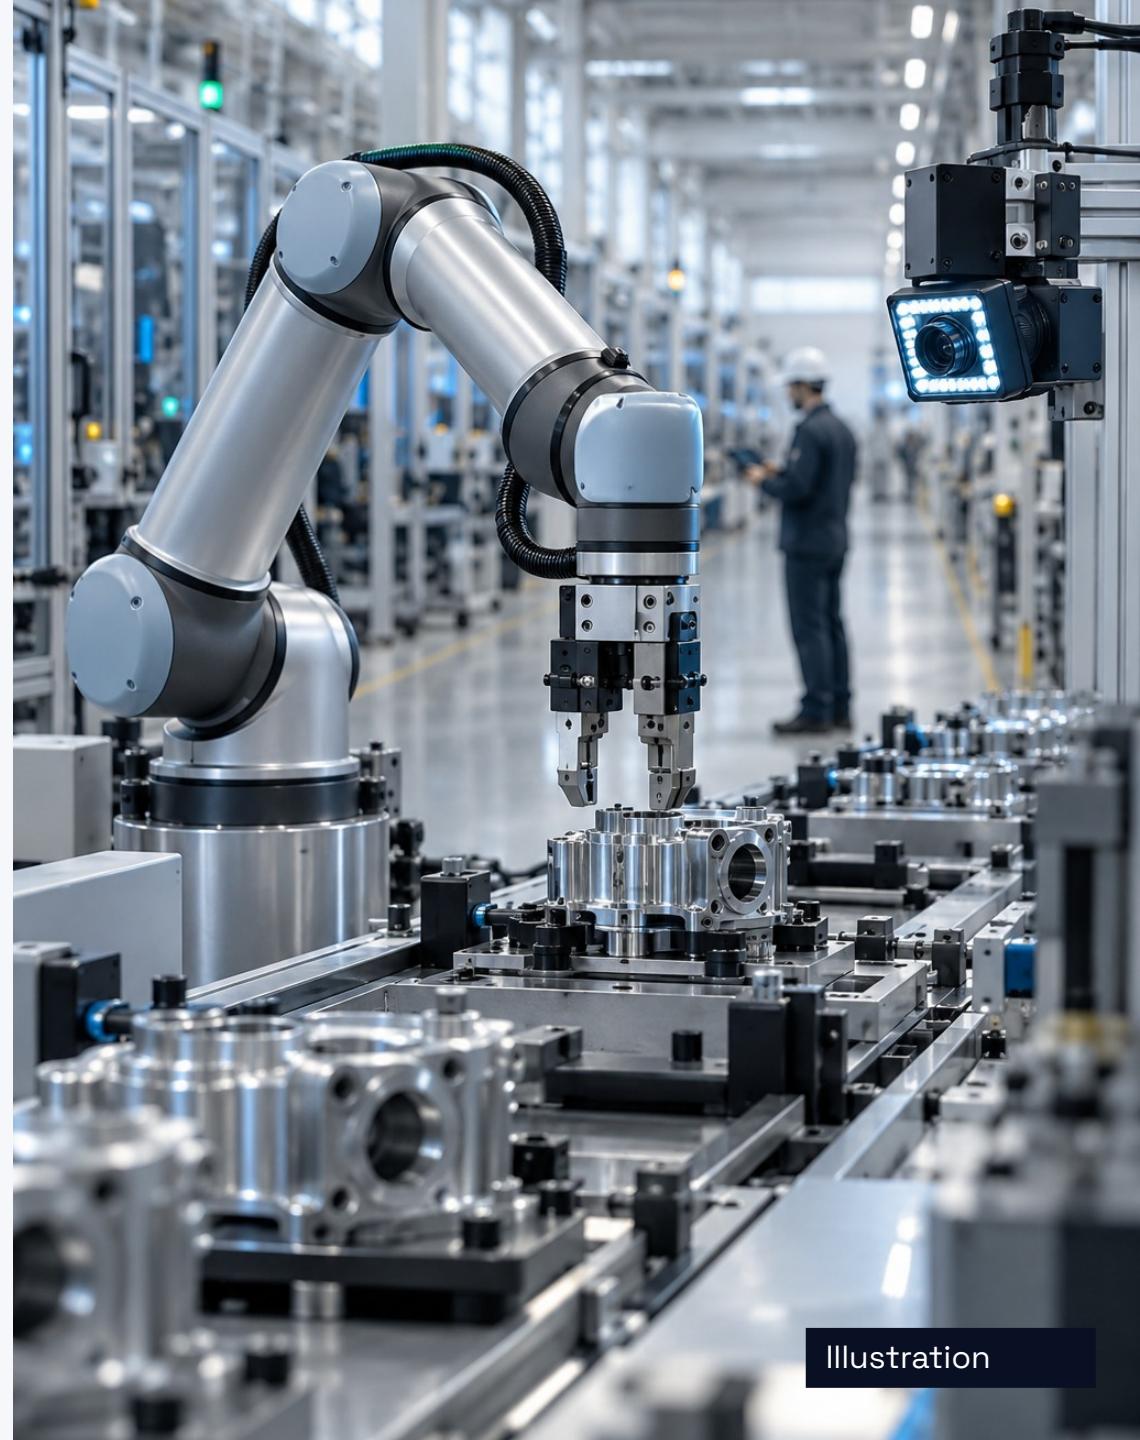

Analysis and forecasts rely on data quality, history, collection conditions and specialist expertise.

Predictive Maintenance

Equipment data and maintenance log analysis for changes, early warnings and maintenance planning.

Operational Integration

Apps and APIs for results, with documented settings and clear operating and support roles.

Illustration

Smart Devices & Technologies

We define specifications and coordinate sourcing, integration and field trials with specialists to meet operating needs.

Robotics

Service, industrial, collaborative and education robots, with setup, integration and training.

Cameras

Vision, thermal, depth and 3D cameras, matched to site, accuracy and integration needs.

Drones

Inspection, surveys, maps and farming. Delivery studies with qualified providers and operators.

Connected Devices

Sensors and controls for environment, usage, occupancy and selected building functions.

Industry & Resources

We start with a defined use case, combine software and domain expertise, then expand based on test results and data availability.

Industry & Manufacturing

Quality and fault monitoring, maintenance planning, robotics and system integration.

Oil & Gas

Asset analytics, visual and thermal inspection, safety and facilities monitoring, and technical knowledge.

Energy, Water & Sustainability

Demand forecasts, asset and meter monitoring, loss analysis, and resource and maintenance dashboards.

Training & Capability Building

We connect training to real tasks, helping teams use tools, review their outputs and measure their impact.

Leaders & Professionals

Applied training in strategy, governance, law, procurement, HR, finance, marketing, sales, customer service and projects.

Learning & Robotics

Coding, robotics and AI programs suited to learners' ages, with appropriate tools and supervision.

Technical & Sector Teams

Data analytics, ML, generative AI, assistants, agents and integration. Tailored learning with specialist trainers.

A Complete Experience

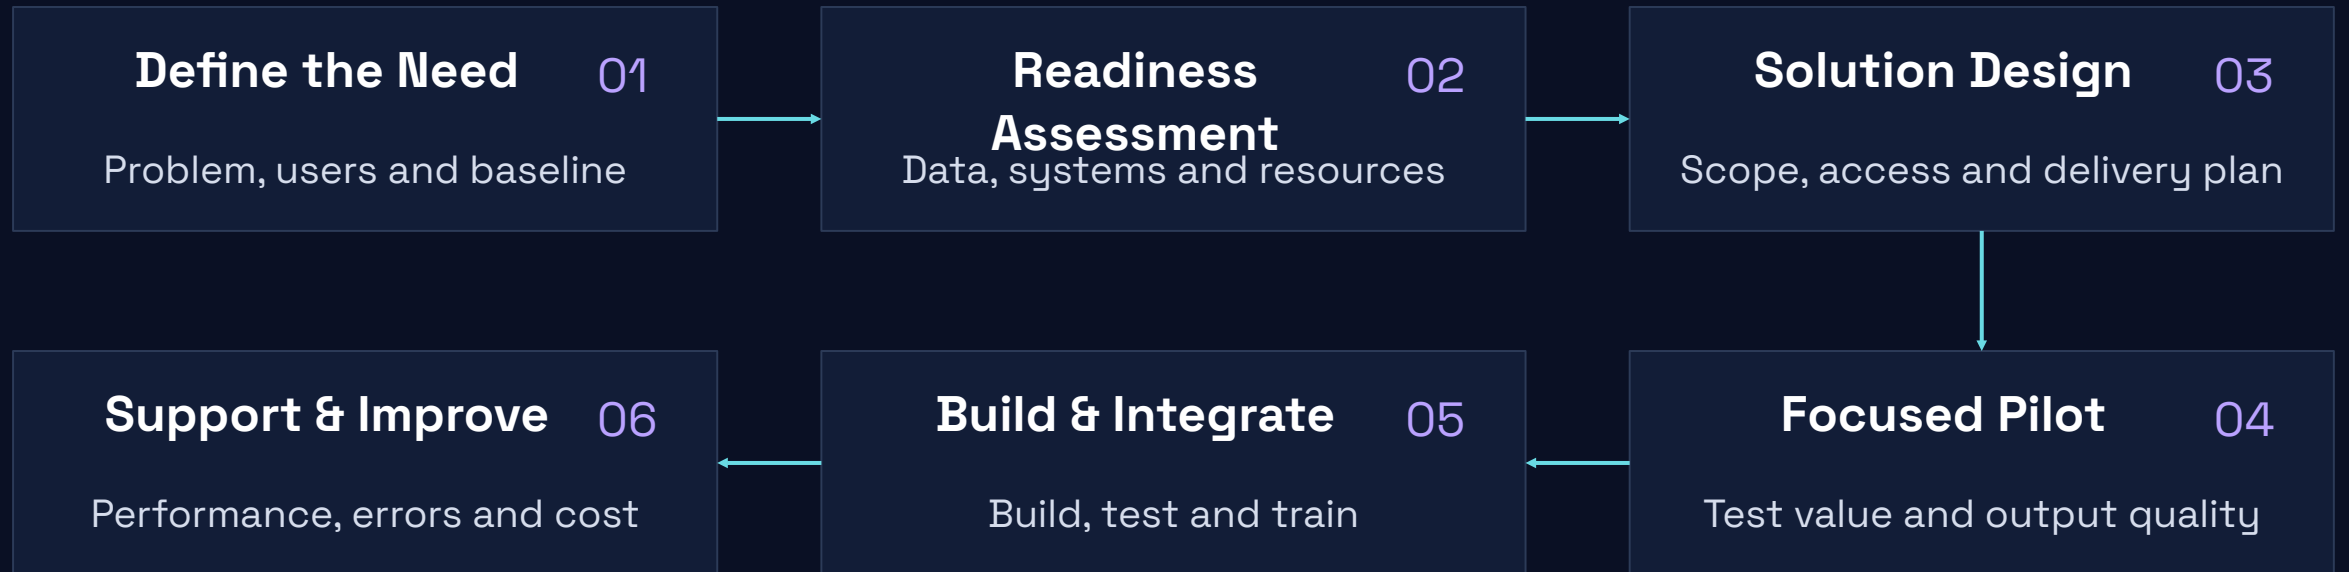

In person, live online or blended, with exercises and a practical project or assessment to measure skills gained.

**Applied Learning
for Everyday Work**

From Need to Operation

Clear stages support result reviews and scaling decisions, with agreed deliverables, acceptance criteria and responsibilities.

Each stage has clear deliverables and a review point before moving forward.

Quality & Operational Continuity

We plan operations and measurement alongside the solution, defining usage, support and development needs from the outset.

01

Fit for Your Business

Hosting and integration reflect data sensitivity, systems and budget. Privacy and security are addressed with your team.

02

Test & Review

Assess answer or prediction quality, edge cases, missing data and integration failures.

03

Relevant Metrics

Agreed metrics cover cycle time, extraction quality, model accuracy, human intervention, uptime and operating cost.

04

Handover & Continuity

Document settings and data sources, train users, and define incident handling, updates and support responsibilities.

Targets are set after assessment. Results are compared with the agreed baseline.

Engagement Models

We tailor the engagement to organizational readiness and need, with a clear scope, deliverables and delivery estimate.

- | | | |
|----|---------------------------------|---|
| 01 | Assessment & Roadmap | Define your starting point with a readiness review, priorities, pilot plan, metrics and key requirements. |
| 02 | Pilot Project | Test value with a policy assistant, contract analysis, bid comparison, invoice extraction or a focused visual inspection. |
| 03 | Build & Integrate | Build, integrate, test and train within your environment, with optional ongoing support and improvement. |
| 04 | Capability Building | Training aligned with team roles, with clear goals, practical content and exercises, delivered in a format that suits participants. |

Let's Take the Next Step

What Challenge Can We Help Solve?

We start with your needs, then define the solution and delivery plan together.
